# Yevgeniy Greco Terentyev

hedysom.github.io

Berlin, Germany
GitHub: hedysom
LinkedIn: yevgreco

## Technical Skills

- Languages: Java, JavaScript/TypeScript, Python, C, SQL, Bash.
- Frameworks/Libraries: JSP, Servlets, Apache Tomcat, React.
- Databases: MySQL.
- Tools/Technologies: Git, JDBC, Neovim, VS Code, IntelliJ IDEA, Arch based Linux distros, MacOS.

## Experience

**Fisciano, Italy** — **Software Engineering Intern — SeSaLab** — **11/2025 - 02/2026**

- Architected and built an automated Linux-based measurement workflow in Bash and Python, enabling systematic comparison of energy-consumption metrics across multiple measurement frameworks (pyJoules, CodeCarbon).
- Executed dynamic energy-consumption profiling and analysis for local SLM inference, running performance benchmarks on multiple open-source models (Gemma, DeepSeek, Qwen, Llama).
- Collaborated with research team to document and validate empirical findings: identified 22–37% gap in energy estimation accuracy, aligning with peer-reviewed literature on measurement accuracy.

## Projects

### E-commerce Website

https://github.com/hedysom/JavaEcommerce

- Technologies: Java, JSP, Servlets, MySQL, JDBC, HTML, CSS, JavaScript, AJAX, Tomcat.
- Designed and implemented a full-stack e-commerce web application using MVC architecture, Java, and MySQL, optimizing data persistence through JDBC for efficient and secure query handling.
- Engineered shopping-cart functionality with Tomcat session management and cookie-based persistence, ensuring consistent state across sessions.
- Implemented role-based access control and password hashing to enforce authentication/authorization policies for account protection.
- Developed AJAX-based background cart operations in JavaScript, eliminating full-page refreshes and improving user interaction flow.

### Habit Tracker

https://habit-tracker-gegenio.vercel.app/

- Technologies: React, TypeScript, Tailwind CSS, Vite, React Context API, date-fns, localStorage.
- Built a fully client-side habit tracker with React 19, TypeScript, and Vite, writing reusable and responsive Tailwind CSS components.
- Decoupled add/delete/toggle operations from presentational components with centralized state(Context API) through a custom hook.
- Persistent habits, completion history and streaks across sessions via a custom hook using localStorage.
- Added toggleable daily completion buttons with disabled future dates, and shipped the production build to Vercel (oxlint, React Compiler).

## Education

**Fisciano, Italy** — **University of Salerno** — **10/2021 - 03/2026**

- B.S. in Computer Science. Final Grade: 110/110 cum laude; GPA: 28/30
- Relevant Coursework: Programming, Object-Oriented Programming (OOP), Databases, Algorithms, Web Technologies, Operating Systems, Networks

**Berlin, Germany** — **Free University of Berlin** — **10/2024 - 08/2025**

- Erasmus Exchange Program (2 semesters)
- Relevant Coursework: Secure Software Engineering, Distributed Programming, Theory of Computation, Software Engineering, Statistics

## Spoken Languages

- English C1, German A2. Mother tounge: Italian, Russian, Ukrainian.

## Additional Information

- Completed 100/180 credits toward a B.S. in Mechanical Engineering; engineering experience at Impulse Modena Racing and H7Lab strengthened requirements analysis, testing/validation, stakeholder/supplier coordination, and technical documentation—transferable to software engineering.
