yevgeniy.terentyev@gmail.com
Nationality: Italian

Yevgeniy Greco Terentyev

hedysom.github.io

Berlin, Germany
GitHub: hedysom
LinkedIn: yevgreco

Education

Fisciano, Italy — University of Salerno — 10/2021 - 03/2026

- B.S. in Computer Science
- Relevant Coursework: Programming, Object-Oriented Programming (OOP), Databases, Algorithms, Web Technologies, Operating Systems, Networks
- Final Grade: 110/110 cum laude

Berlin, Germany — Free University of Berlin — 10/2024 - 08/2025

- Erasmus Exchange Program (2 semesters)
- Relevant Coursework: Secure Software Engineering, Distributed Programming, Theory of Computation, Software Engineering, Statistics

Experience

Fisciano, Italy — Software Engineering Intern — SeSaLab — 11/2025 - 02/2026

- This work answered one practical question: which tool should the lab use today to measure and report the CO2 emissions of its machines? The result was a clear, evidence-based recommendation the team could act on.
- Built an automated tool (Python and Bash) that runs the same energy test through several measurement tools, letting the lab compare results side by side and choose the right one with confidence instead of guesswork.
- Measured the real energy use of AI language models running on lab machines, benchmarking several popular open-source models (Gemma, DeepSeek, Qwen, Llama) to replace rough estimates with concrete numbers.
- Collaborated with the research team to document and validate the results, uncovering a 22–37% gap between the tools' energy estimates — consistent with published research, and directly relevant to how the lab reports its environmental footprint.

Projects

Habit Tracker

https://habit-tracker-gegenio.vercel.app/

- Technologies: React, TypeScript, Tailwind CSS, Vite, React Context API, date-fns, localStorage.
- Built a fully client-side habit tracker with React 19, TypeScript, and Vite, writing reusable and responsive Tailwind CSS components.
- Decoupled add/delete/toggle operations from presentational components with centralized state(Context API) through a custom hook.
- Persistent habits, completion history and streaks across sessions via a custom hook using localStorage.
- Added toggleable daily completion buttons with disabled future dates, and shipped the production build to Vercel (oxlint, React Compiler).

E-commerce Website

https://github.com/hedysom/JavaEcommerce

- Technologies: Java, JSP, Servlets, MySQL, JDBC, HTML, CSS, JavaScript, AJAX, Tomcat.
- Designed and implemented a full-stack e-commerce web application using MVC architecture, Java, and MySQL, optimizing data persistence through JDBC for efficient and secure query handling.
- Engineered shopping-cart functionality with Tomcat session management and cookie-based persistence, ensuring consistent state across sessions.
- Implemented role-based access control and password hashing to enforce authentication/authorization policies for account protection.
- Developed AJAX-based background cart operations in JavaScript, eliminating full-page refreshes and improving user interaction flow.

Technical Skills

- Languages: Java, JavaScript/TypeScript, Python, C, SQL, Bash.
- Frameworks/Libraries: JSP, Servlets, Apache Tomcat, React.
- Tools/Technologies: Git, Pi Harness, GitHub Copilot, Neovim, VS Code, IntelliJ IDEA, Linux Distributions (Ubuntu, Arch, NixOS), MacOS.

Spoken Languages

- English C1, German A2. Mother tounge: Italian, Russian, Ukrainian.

Additional Information

- Acquired systems thinking, analysis, testing/validation, stakeholder/supplier coordination, and technical documentation through engineering experience at Impulse Modena Racing and H7Lab; Completed 100/180 credits toward a B.S. in Mechanical Engineering.
